

Confidence. Control. Credibility.

The RemotePoint Navigator from Interlink Electronics, puts presentation success discretely in the palm of your hand, giving you complete control of your slides, confidence in your delivery, command of the audience and the credibility of the most polished presenter.

With up to 50 feet of omni-directional RF wireless range, Navigator has no line-of-sight issues--allowing you to focus on your audience, not your slides. The compact size is comfortable to operate and raised icons identify options, even in the dark. Every Navigator shares a unique code with its receiver, preventing interference from other remote controls. Deliver your next presentation with the peace of mind that comes from knowing that every slide will advance reliably, at the moment you command it to.

Not a computer wizard? You don't need to be. Just plug in the USB receiver, pick up the RemotePoint Navigator and start winning over the world—one audience at a time.

Features and Benefits

Designed for Presenters

The leader in design innovation for professional presenters introduces RemotePoint Navigator. Designed with the mobile professional in mind, the Navigator simplifies presentation control while maintaining the key features that presenters need.

Slide Control

Interlink Electronics RemotePoint Navigator is designed to put the power of slide control in the hand of the presenter. The forward icon advances slides and the back icon provides a reliable method to return to the previous slide.

Hide

When you need the audience to focus on you, hide your presentation with the press of a button. Press again and slides reappear for dramatic impact.

Laser Pointing

An integrated laser pointer can be used to highlight key points and direct the attention of an audience to a specific detail in a presentation.

Range

With RF range of 50 feet, the presenter is free to move about the room while delivering a presentation. Curtains, people and walls are no obstacle for RemotePoint Navigator. With RF technology, the 900 MHz signal is omnidirectional so a direct line-of-sight is not necessary.

Tactile Icons

The icons on the Navigator have raised surfaces so the options are identifiable with your fingertips. No more searching for the right button in a darkened room. No more fumbling with the wrong slides. Your focus should be on your presentation, not your remote.

Individual Navigator Codes

Every RemotePoint Navigator has a unique code that it shares with its' receiver. This ensures that no other remote control can interfere with your presentation.

Patented Laser Programming Technology

The code for each individual remote is hidden in the laser pointer. If it is necessary to reprogram the receiver or share a receiver with another Navigator user, simply shine the laser into the programming window of the receiver and the receiver adopts the new remote code.

Plug and Play Simplicity

Navigator has no software to load, no complex installation and no compatibility hassles. Carry it to every presentation. It works with most any computer. All you need is a USB port. Plug in the receiver and start presenting.

Low Cost of Ownership

Navigator is durable and built to last. The buttons are solid metal and resistant to the fading, wearing, and flaking of plastic. The metal case will not crack when dropped and will still shine after years of use.

Design Appeal

For anyone that spends time in front of an audience, appearance matters. The exquisite and unique design of the RemotePoint Navigator demonstrates superior attention to detail and will leave a lasting impression.

Size

At a mere four inches long, Navigator fits in the palm of your hand. All of the buttons are within reach of your thumb and it's small and light enough to put in your pocket.

Comfort Grip Surfaces

Both top and bottom of the Navigator case are created with the nervous presenter in mind. The top has a non-slip textured surface and the suede-feel bottom stays motionless in your palm.

Navigator Positioning

Mobile Professionals - RemotePoint Navigator is designed for mobile professionals who perform presentations as a part of their job function. Navigator is an elegant solution to wireless presentation control that is simple to understand, install and operate. With reliable slide control at up to 50 feet, Navigator puts control in the palm of the presenter and removes the mistakes and guesswork that stem from operating unfamiliar remotes or hunting for the forward key on a keyboard in a darkened room.

Educators - For the professional educator that uses computer slide presentations in the classroom, RemotePoint Navigator provides classroom mobility and lecture control. Navigator is simple to operate, easy to handle and provides intuitive controls that help keep the mind and eyes on the students rather than on your teaching tools.

Why Buy Interlink Electronics

Market Leader – Interlink Electronics is a world-renowned leader in providing intuitive-interface remote controls with over seventeen years of proven experience. Interlink Electronics is offering a wide selection of RF Remote Control solutions for use with mobile computers. Interlink Electronics consistently offers unique and innovative form factors and is the logical choice for wireless presentation control. Interlink Electronics's world-class distribution, service, and support will further solidify Interlink Electronics position in the presentation control market.

Wide Product Assortment - Interlink Electronics offers one of the widest selections of wireless products for presentations and meeting rooms including the RemotePoint, RemotePoint RF, RemotePoint Plus, VersaPoint Keyboard, RF Combo Pack, and FreeBeam Wireless Whiteboard System.

Reliability, Warranty and Support – Interlink Electronics has a history of providing products that are durable, robust, and consistently reliable. Interlink Electronics products come with a limited one-year warranty to ensure customer satisfaction. Interlink Electronics highly trained personnel are available to help with any customer service issues toll free.

Product Descriptions for Distributor Publications

25 Words - RemotePoint Navigator puts wireless presentation control at your fingertips. Effortlessly advance your slides with exceptional freedom of motion that comes with 50' of RF range.

50 Words - RemotePoint Navigator puts wireless presentation control at your fingertips. Effortlessly advance your slides with 50' of RF range, providing freedom of motion and confidence in delivery. 100 Words - RemotePoint Navigator from Interlink Electronics puts reliable wireless presentation control in the palm of your hand. Effortlessly advance or review your slides with up to 50' of 900MHz RF range. With extended freedom of motion, you can focus on the audience and your delivery, not your slides. Your personal code prevents interference and the integrated laser pointer programs any Navigator receiver to accept your commands. Easily identifiable, raised icons and sleek metal styling make Navigator the ideal tool for confident and polished presentations. Just plug in the USB Receiver and start winning over the world—one audience at a time.

Objection Handling – Distributor and Reseller

Objection	Response
1. Who is going to spend \$149 on a remote control when they could just say “Next slide please?”	Navigator is designed to put control back in the hands of the presenter and to improve presentation skills. The best presenters know that they must have the freedom to move around the room to keep the attention of an audience. Navigator fits discretely in the presenters palm and advances slides without line of sight issues. These are valuable benefits to anyone who presents on a regular basis. Microsoft estimates that there are 72 million of frequent presenters worldwide.
2. What happened to mouse control, don't the users need that?	Mouse control is a feature commonly found on remote controls for projectors. Although it can be a strong addition to a remote control, most presenters simply want control of the backward and forward motion of their slides. Mouse control complicates this process and the possibility of accidental use is a negative for the average presenter.
3. The 900 MHz band has so much traffic, won't there be interference from other remotes?	Each Navigator comes with it's own transmission code out of 64,000 possible addresses. This ensures that Navigators will not interfere with each other. The receiver is programmable to the code of any Navigator simply by shining the laser on to a special window on the receiver. This flexibility enables multiple users to share receivers, or for a single Navigator control multiple computers.
4. Presenters look silly when they hold something large, point the remote at the projector and wave their arms. Won't most presenters avoid using a cumbersome remote?	Navigator is just four inches long and nearly disappears in your hand. The remote does not need to be pointed in the direction of the computer to function perfectly. In fact, Navigator will operate computers that are behind cabinets, under desk and even while in your pocket.
5. Why should I buy Navigator when there are a number of other competitors out there?	Navigator is simply the best-designed presenter product in the world. It's effortless to operate, comfortable to hold and completely reliable. Other devices based on IR, shorter range RF, and hand gestures can't compare to the simplicity and elegance of Navigator.
6. People are concerned about wireless data and their safety. Is RF dangerous?	Navigator meets stringent government and industry regulations for safety. All Interlink Electronics Navigator products are tested and approved.
7. Why should I buy Interlink Electronics products over another company's competitive products?	Interlink Electronics offers customers world-class service and support of their premium products. Interlink Electronics has expertise in the development of state of the art remote control products and works in close cooperation with the top projector and personal computer manufacturers in the world.
8. Couldn't I just buy a cheaper remote that does the same thing?	Navigator wireless technology has much more capability than infrared remotes. Infrared is shorter range than Navigator wireless technology, and only supplies line-of-sight, point-to-point communication. In contrast, Navigator technology is omni-directional, transmits a greater distance than infrared, and offers point-to-multi-point transmission capability.
9. How did you get around using software for this device? Isn't it necessary?	Navigator uses the power of USB plug and play capability and combines simple, single key commands that drive a presentation. Software installation can be cumbersome to presenters who must present from multiple locations and computers and Navigator works without software.
10. What makes Navigator so special?	RemotePoint Navigator is the simplest remote control to install and use. Simply plug in the USB receiver to any computer with a USB plug, pick up the remote and let the intuitive buttons guide you through your next presentation. With 50' of range, no line of sight issues and plug and play operation, Navigator is a one of a kind presenters companion.

Specifications

Included with RemotePoint Navigator

- USB Receiver with protective cap
- Carrying Case
- USB Extension Cable
- 2 AAA Batteries
- User's Guide

Remote Specifications:

- Up to 50' (15m) Range
- Unique Personalized Address
- 900MHz Frequency
- Compact Size at 2" x 4" x 1" (51mm x 102mm x 25mm)
- Weight of less than 5 ounces (84g)
- 2 AAA battery powered
- 6 months typical battery life
- Laser: Class II Laser

Receiver Specifications:

- USB Interface
- Dimensions of 13/16" x 3 1/2" x 1/8" (21mm x 89mm x 11mm)
- Weight of less than 1 ounce (28g)
- Programmable via Laser
- LED Address setting indicator

System Requirements:

- USB Capability
- Windows 98, 2000, ME, XP

Warranty

- One Year, Limited
- 30 day money back guarantee
- Toll Free Customer Support
